

Flash XDR / nanoFlash FileConverter Release Notes

2009 Convergent Design, Inc

Version 1.3 Release, 26-Oct-09

Version 1.3 (26-Oct-09)

1. Fixed a bug in 140 Mbit I-Frame/long-GOP and 220 Mbit I-Frame files conversion.
2. Fixed audio bug in some conversions.

Version 1.2 (16-Sept-09)

3. Added support for files up to 30 Gbytes in size. Files which are larger than 4 Gbytes are broken up into 4 Gbyte file increments when converted.

Version 1.1 (28-Aug-09)

4. Added support for exported Final Cut Pro files (XDCAM EX or XDCAM 422 files only).
5. Added non-fragmented copy to CompactFlash cards from Macs for originally recorded files from the Flash XDR / nanoFlash.

Limitations, version 1.1:

1. Does not support files greater than 4 Gbytes.

Version 0.2 (19-Feb-09)

6. If a duplicate destination MXF file is found, the destination file is renamed with an appended number instead of overwriting the existing MXF file.
7. Partial destination MXF files are now removed if they are not completed for some reason.
8. Repaired timecode in 720p conversion.

Known issues, version 0.2 :

1. Timecode may be off by a couple of frames after conversion.

Version 0.1 (13-Feb-09)

Initial release. Supports Quicktime MOV to MXF conversion of Flash XDR files.
